January 2013 and June 2013**

GCSE COMPUTING

A453 Programming Project

**CONTROLLED ASSESSMENT
MARK SCHEME**

This assessment may be periodically reviewed. Please check on OCR Interchange that you have the Controlled Assessment material valid for the appropriate assessment session.

- This document consists of **4** pages. Any blank pages are indicated.
- **MAXIMUM MARKS 45.**
- The list of programming techniques referred to can be found in the specification, section 2.3.1.

Teachers are responsible for ensuring that assessment is carried out against the Controlled Assessment set for the relevant examination series (detailed above).

Assessment evidence produced that does not reflect the relevant examination series will not be accepted.

The board set scenario will consist of up to three tasks to be solved by the candidate. The three tasks may be connected but you are only required to solve the problems set and do not need to resolve these into a single solution. The marking criteria refer to the overall solution of the tasks set in the scenario and for full marks to be available you must provide solutions to all of the tasks. The overall set of solutions will be considered against the marking criteria to identify the most appropriate range, and appropriate mark within that range, for each section.

Programming Techniques 18 marks available

Marking Criteria	0–2	3–4	5–6
Use of programming techniques AO1 – 2 AO2 – 4	There is an attempt to solve parts of the tasks using few of the techniques identified.	There is an attempt at most parts of the tasks using several techniques.	There is an attempt to solve all of the tasks using most of the techniques listed.
Marking Criteria	0–4	5–8	9–12
Efficient use of programming techniques AO1 – 4 AO2 – 8	The techniques used may not be entirely appropriate to the problem and will only produce partially working solutions to a small part of the problem.	The techniques will be used appropriately giving working solutions to most of the parts of the problem. Some sections of the solution will be inefficiently coded.	The techniques are used appropriately in all cases giving an efficient, working solution for all parts of the problem.

Design 9 marks available

Marking Criteria	0–3	4–6	7–9
Design AO2 – 3 AO3 – 6	There will be vague comments on what the task involves and a vague outline describing the intended approach to some parts of the problem. There will be brief comments on how this might be tested but with no mention of success criteria.	There will be a brief analysis of the tasks indicating what is required for each of the tasks. There will be a set of basic algorithms outlining a solution to most parts of the problem. There will be some discussion of how this will be tested and how this compares to the identified outcomes in the tasks. There will be discussion of the variables to be used and some general discussion of validation.	There will be a detailed analysis of what is required for these tasks justifying their approach to the solution. There will be a full set of detailed algorithms representing a solution to each part of the problem. There will be detailed discussion of testing and success criteria. The variables and structures will be identified together with any validation required.

Development 9 marks available

Marking Criteria	0–3	4–6	7–9
<p>Development AO2 – 5</p> <p>AO3 – 4</p>	<p>There will be some evidence to show a solution to part of the problem with some evidence to show that it works. Code will be presented with little or no annotation, the variable names not reflecting their purpose and with little organisation or structure.</p>	<p>There will be evidence to show how the solutions were developed. There will be some evidence of testing during development showing that many parts of the solution work. The code will be organised with sensible variable names and with some annotation indicating what sections of the code does.</p>	<p>There will be detailed evidence showing development of the solution with evidence of systematic testing during development to show that all parts work as required. The code will be well organised with meaningful variable names and detailed annotation indicating the function of each section.</p>

Testing 9 marks available

Marking Criteria	0–3	4–6	7–9
<p>Testing and evaluation</p> <p>AO2 – 4</p> <p>AO3 – 5</p>	<p>There will be evidence to show that the system has been tested for function but the test plan will be limited in scope with little structure. There will be little or no evidence to show how the result matches the original criteria.</p> <p>The evidence of written communication is limited with little or no use of specialist terms.</p> <p>Errors in spelling, punctuation and grammar may be intrusive. Information may be ambiguous or disorganised.</p> <p>There will be some comments on others' and their own input into group work.</p>	<p>There will be a test plan covering many parts of the problem with some suggested test data. There will be evidence that the system has been tested using this data. There will be some evidence to show how the results of testing have been compared to the original criteria. There will be a brief discussion of how successful or otherwise the solutions are.</p> <p>Produces evidence of good written communication using some specialist terms.</p> <p>There will be few errors in spelling, grammar and punctuation.</p> <p>Information for the most part will be presented in a structured format.</p> <p>They will have commented on their own and others' contribution to any group work and how it was useful.</p>	<p>The test plan will cover all major success criteria for the original problem with evidence to show how each of these criteria have been met, or if they have not been met, how the issue might be resolved. There will be a full evaluation of the final solution against the success criteria.</p> <p>A high level of written communication will be obvious throughout the task and specialist terms/technology with accurate use of spelling will have been used. Grammar and punctuation will be used correctly and information will be presented in a coherent and structured format.</p> <p>They will provide an evaluation on theirs and others' contribution to any group activities.</p>

Copyright Information

OCR is committed to seeking permission to reproduce all third-party content that it uses in its assessment materials. OCR has attempted to identify and contact all copyright holders whose work is used in this paper. To avoid the issue of disclosure of answer-related information to candidates, all copyright acknowledgements are reproduced in the OCR Copyright Acknowledgements Booklet. This is produced for each series of examinations and is freely available to download from our public website (www.ocr.org.uk) after the live examination series.

If OCR has unwittingly failed to correctly acknowledge or clear any third-party content in this assessment material, OCR will be happy to correct its mistake at the earliest possible opportunity.
